FIGURE 4

FIGURE 5

Figure 1 consists of two line graphs showing tumor growth curves for A375.S2 Melanoma (left) and DLD-1 Carcinoma (right). The y-axis represents Tumor volume (Cubic mm) and the x-axis represents Days Post Inoculation. The legend indicates three treatment groups: Vehicle (squares), 100mg/kg q.d. (triangles), and 100mg/kg b.i.d. (circles). A horizontal line indicates the initial tumor volume, and a red bar labeled 'Treatment' indicates the period from day 4 to day 10.

A375.S2 Melanoma

Days Post Inoculation	Vehicle (Cubic mm)	100mg/kg q.d. (Cubic mm)	100mg/kg b.i.d. (Cubic mm)
3	150	150	150
4	150	80	150
6	320	230	230
8	360	280	240
10	400	290	210
12	420	330	240
14	580	470	280
16	760	600	430

DLD-1 Carcinoma

Days Post Inoculation	Vehicle (Cubic mm)	100mg/kg q.d. (Cubic mm)	100mg/kg b.i.d. (Cubic mm)
5	380	380	350
6	380	380	320
7	380	380	300
8	460	300	300
9	580	350	350
10	570	370	370
11	700	490	490
12	760	560	560
